

Coal - Montana

September 26, 1887

Hill to C. A. Broadwater

Your report to Egan on Belknap coal is before me. We'll bring a diamond drill to work that field at once and I think from Napier's report the dip is such that it will carry coal under the track about 150 feet below the surface. On this trip I expect to examine the coal in the openings at Belknap and also at Box Elder and Bull Hook.
